

THE SCISSOR GATE

TIMELESS DESIGN & PROVEN PERFORMANCE

Classic Design with Modern Durability

The Scissor Gate combines timeless elevator styling with modern durability, making it one of the most trusted and proven gate options in residential elevators today. Its traditional accordion-style frame delivers a classic elevator aesthetic while serving as a secure barrier during travel.

Built In-House

Manufactured in-house by Residential Elevators, each gate is built with extruded, corrosion-resistant aluminum and stainless steel hardware, ensuring consistent quality, craftsmanship, and shorter lead times compared to specialty gate options.

Smooth, Reliable Operation

Its lightweight construction allows for smooth, effortless manual operation, while its durable design is engineered to provide years of reliable performance. The Scissor Gate has earned a reputation for consistent operation year after year.

Enhanced Safety Measures

The Scissor Gate is compatible with advanced light curtain systems that detect obstructions and automatically stop elevator movement, providing an additional layer of safety and peace of mind for homeowners.

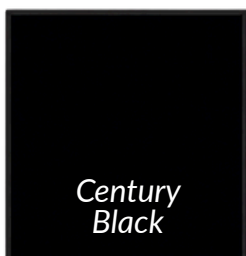

Ideal for Coastal Homes

Designed to withstand the effects of humidity, salt air, and daily use, the Scissor Gate is particularly well-suited for coastal and beachfront environments where corrosion resistance is critical.

A Proven Favorite

Elegant, durable, and built to last, the Scissor Gate remains a favorite among homeowners seeking traditional elevator styling without compromising on safety, reliability, or long-term performance.
